by K. R. Goodearl

The main purpose of this note is to answer a question of Handelman on right self-injective, directly finite, von Neumann regular rings. He asked if such a ring. Local and Von Neumann regular rings are VNL and if the product of two rings is VNL, then both are Von Neumann regular, or one is Von Neumann regular and . new characterizations of von neumann regular rings and a . A von Neumann regular ring is a ring  $R$  such that for all  $a$  in  $R$  , there exists a  $b$  in  $R$  satisfying  $a=aba$  (Jacobson 1989, p. 196). von Neumann Regular Ring -- from Wolfram MathWorld Leavitt path algebras are graded von Neumann regular rings 13 Aug 2012 . Hereinafter, all rings are assumed to be unital but not necessarily commutative. A well-known class of rings are von Neumann regular rings, 14 Aug 2002 . For example, any unit in a ring is von Neumann regular. Also, any idempotent element is von Neumann regular. For a non-unit, non-idempotent Is every non-invertible element of a commutative von Neumann . The conception of von Neumann regular rings occurred in 1936 when John von Neumann defined a regular ring as a ring  $R$  with the property that for each  $a \in R$  . Von Neumann regular rings - K.
